

১. তোমার সম্পর্কে বলো

Ans:

I am Dhananjay and currently, I am studying B.Sc maths at The University of Rajshahi. Though I am studying maths, I am passionate about programming since childhood. That's why I have completed a junior MERN stack web development course from Programming Hero. In this course, I have brightly learned JS, ES6, React JS, HTML5, CSS3, and two CSS frameworks bootstrap and tailwind CSS, and more lightly learned MongoDB, Node JS, and Express JS. I enjoy coding until getting the desired output and am also capable to handle any error with keeping on hard patience. If I got a chance to do something for your company, I will be working hard like as my own company to build up unity, create values and reach out the company to customers. Besides, The award named the first boy of class six is my best pleasure award and it's not an award but also a motivation to carry on my study with good results.

২. তোমার বেস্ট প্রজেক্ট কোনটা? সেটার মেইন মেইন ফিচারগুলো কি কি ? সেটা করতে গিয়ে তুমি কোন কোন চ্যালেঞ্জ ফেইস করছো?

Ans:

Basically, I have completed many projects for practice purposes. In the last two projects, I have used the same technology with different features. But in this last project, I had to face the challenge to do CRUD operations for eye-decorated coding. The codes were made randomly and looked rubbish. That's Why I have made a Hooks called useMongoDB where I managed the CRUD operation easily by dynamic API access. In this project, The most key features are:

1. User restriction for different routes
2. Viewers can buy products and when successfully complete an order then they can give us review
3. An admin can make others as an admin, add products, manage orders and products.
4. Only Admin can update or delete product
5. The home page will dynamically be shown by backend data updation

৩. কেন তোমাকে হায়ার করা উচিত। কেন ওই কোম্পানি যে ই পজিশনের জন্য হায়ার সাথে তোমার মিল কি?

Ans:

I am a dedicated person until I have completely done my target and also worked on a proper plan to get the most output. Besides, I enjoy group work and love to build communication with everyone. For Example, When I was in class seven then heard that a web developer makes a website for various purposes. Then I started to research online for making myself a web developer and took information from friends, elders, and neighbours. After that, I introduced myself to Wapka and Blogspot where people can make a website for free but I'm not satisfied with that

technology because I want to do coding and develop my programming skill. From class seven to twelve, I stayed patient because I was focusing on my academic study but always wanted to get a chance to do a course. After being admitted to a reputed public university I have started to learn web development with programming hero. Now, I am suitable for your company as a junior MERN stack developer and am capable of carrying on my responsibility.

8. What is your salary expectation?

Ans:

This is my first job application, and I am motivated to learn more about my sector. As a fresher, I expect that the salary would be competitive and preferable for me. I am ready to accept your standard salary offer for entry-level jobs. [The salary would be mid-range which you fixed to hire us. {It can be 15-20k taka per month}]

৯. Do you have any questions for us?

Ans:

1. Sir/Mam, is there any opportunity to boost our skills after hiring us?
2. Sir/Mam, would it be any problem if I help other members to solve problems and also get help from others?
3. Sir/Mam, is there any special team to take care of your company?

If they ask why? Because They can take feedback from developers and customers too to update your company's features?

if I make any mistake, please pardon me....
