Question - Answer

Question -01: How to answer Tell me about yourself as a web developer?

Answer: Myself Md. Sujan. At present, I am an undergraduate at Green University Bangladesh in Computer Science and Engineering. Besides my study, I am a positive, enthusiastic, and competent MERN Stack Web Developer. It's been 1 year; I'm working as a web developer. I've worked on a number of websites and contributed to several excellent web design projects. I have extensive experience working both alone and as part of a team on often time-sensitive, challenging web development projects that require outstanding creative and technical capabilities and the ability to ensure all work is optimized across a wide range of platforms. As a Web Developer, I take my job seriously, which means I always make sure my abilities are up to date in this rapidly changing field.

My Skill Set: HTML5, CSS3, Bootstrap, tailwind, JavaScript, React JS, React hook form, react table components, firebase, Node JS, Express JS, and MongoDB.

Question -02: What was your best project? What are the main features and challenges you face to do the project?

Answer: The ToolsBD web application is my favorite project. It is a MERN stack project. For doing the project I used React JS, Express JS, MongoDB, Firebase, Bootstrap, Tailwind CSS, CSS, and HTML. It was a full-stack application that allowed users to order tools. If a user wants to buy tools, they must first register an account, which they may do using Google or GitHub, and then they can order tools via the application. Admin can cancel any order placed by a user, as well as create another admin user and other functions. I was having some issues because it was my first full-stack project, so I couldn't implement a payment method. After that, I went to Google and read some articles about payment getaway, which I was able to solve. However, there was a new problem: I couldn't get a transition id and couldn't figure out which user made the payment. I assumed it was a striped getaway problem, but I was wrong, so I went to Google and watched some YouTube videos, which helped me to fix the problem.

Question -03: Why Should we hire you?

Answer: Honestly, I almost feel like the job description was written with me in mind. I have the 1 year of programming experience you're looking for, a track record of successful projects, and proven expertise in agile development processes. At the same time, I have developed my communication skills from working directly with a team, which means I am well prepared to work on high-profile, cross-department projects. I have the experience to start contributing from day one and I am truly excited about the prospect of getting started.

Question -04: What is your salary expectation?

Answer: This is my first job application, and I am motivated to learn. What I am looking forward to is building a career in the field I love. These are my initial years in the corporate world. I want to extend the reach of my knowledge and also my polish skills. I appreciate the chance to interview for this position, and the salary is not my priority. Since I am just starting my career, I am more focused on gaining knowledge and experience. I am ready to accept your standard salary offer for entry-level jobs. But ideally, I expect my monthly salary range would be 20,000 to 25,000 BDT.

Question -05: Do you have any questions for us?

Answer:

- Is there anything you think I will be doing that is not included in the job description?
- What challenges have past employees faced in this job?
- Who will I work most closely with?
- How big is the team, and what other job roles are within it?
- What are the next steps in the hiring process?
- What are the goals the company has for the next year?
- What is the company culture like?
- What would be expected of me during the first three months if I'm hired for this position?
- What projects is the company currently working on?
- What challenges has this company faced recently, and what new challenges do you expect the company to face in the future?
- Does the company value more independent workers or team collaborators?

Why should we hire you fresher?

Computer science has always been my favorite subject and that is why in college I took up projects which involved building mobile applications. This knowledge will surely help me form a foundation and build more knowledge. I will be loyal and dedicated, and will never cross a line. I am reliable, hard-working, and understand all processes thoroughly. I am good at maintaining relationships with people too. I am interested in being a full-stack developer, and I am sure I will realize my career dreams with your company.
